

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

1. (currently amended) A security module for a motor vehicle security device, comprising:

a module housing;

a belt take-up roller for the taking up onto[[,]] and the unwinding therefrom of a safety belt, of a wherein the safety belt is operable to belt in a seat occupant seated in a vehicle seat in the motor vehicle; and

a side airbag module having an airbag inflatable into a deployed position in which it provides lateral support for the seat occupant, the side airbag module also including an associated gas generator for supplying compressed gas to effect deployment of the airbag[[,]]; and the take-up roller, the safety belt, and the side airbag module being commonly mounted in the module housing, wherein the security module is disposed on the inboard, vehicle interior-facing, side of the seat back of the vehicle seat, and wherein the belt take-up roller is disposed adjacent an exit slot formed in the module housing through which the safety belt exits the module housing and the side airbag module is located underneath the belt take-up roller.

2. (original) A security module according to Claim 1, wherein the security module is adapted to be mounted on a side wall of the seat back of the vehicle seat.

3. (original) A security module according to Claim 2, wherein the module housing includes a wall disposed against the side wall of the seat back having a shape conforming to the outer contour of the side wall of the seat back.

4. (original) A security module according to Claim 2, wherein the module housing comprises an outer surface compatibly configured with a seat cover that covers the vehicle seat.

5. (canceled)

6. (canceled)

7. (canceled)

8. (canceled)

9. (currently amended) A security module according to Claim 1 8, wherein the module housing is disposed on, and oriented relative to, the seat back of the vehicle seat such that the exit slot for the safety belt is disposed in the region of an upper edge of the seat back and the airbag of the side airbag module exits the module housing ~~via the exit slot~~ in the region adjacent to ~~of~~ an upper arm of a seat occupant seated on the vehicle seat.

10. (original) A security module according to Claim 1, wherein the module housing comprises a predetermined give-way location operable to give way so as to provide an exit opening through which the airbag deploys from the module housing.

11. (original) A security module according to Claim 1, wherein the belt take-up roller and the side airbag module are connected to a common control and the module housing comprises a socket plug for common connection of the belt take-up roller and the side airbag module to a vehicle control system.
